

PIOTR JELENIEWICZ

I am a 6th-semester Electronics and Telecommunications student at Gdarisk University of Technology. I combine programming, electronics, automation, and a practical approach to technical systems. I am interested in solutions that are reliable, measurable, and genuinely useful.

6th semester Electronics and Telecommunications, GUT	SimLE Lead software developer, radio telescope	RL / AI Engineering thesis with PPO/DQN	Backend / IT REST API, Windows Server, MS ADCS
--	--	---	--

PROFILE

I focus on automation, AI/ML, control systems, and applications supporting technical processes. I have practical experience with REST APIs, Windows Server, MS ADCS, DCOM, cloud tools, virtualization, and web projects. I am also active in SimLE as the lead software developer of a radio telescope project.

EXPERIENCE

Intern
ASSECO | Telecommunications and Media Division | 2024.09 - 2024.10

Scope:

- REST API interface:** Implemented an endpoint for accepting certificate issuance requests and returning completed certificates to clients.
- MS ADCS integration:** Established communication with a certification authority server via DCOM and forwarded processed requests to the CA system.
- Deployment preparation:** Configured the application for launch and hosting in a Microsoft IIS server environment.

Result:
Practical knowledge of Windows Server 2019, REST APIs, CA certificates, DCOM, and certificate-system security.

Mathematics Tutor
Self-employed | 2025.08.29 - now

Scope:

- Teaching levels:** Advanced and standard high-school mathematics as well as primary-school mathematics.
- Student work:** Diagnosing gaps, explaining problem-solving methods, and building a regular learning rhythm.

Result:
Developed technical communication, clear explanation of difficult topics, and responsibility for a learning process.

SIMLE AND RADIO TELESCOPE

SimLE Interdisciplinary Student Research Club
Active member | lead software developer in the radio telescope project | SeeSky project

SimLE is an interdisciplinary student research club at Gdańsk University of Technology with projects in aerospace, marine tech, bionic prosthetics, and radio telescopes. The club's projects include Stardust/STORMDUST, HEDGEHOG, SimBa, SeaSentinel, Silverhand, and SeeSky; some teams work on rocket systems and launches carried out also in the United States. I work in the SeeSky project, focused on a radio telescope system and a web application for remote operation.

- Participation in the SeeSky project within the SimLE student research club.
- Construction of a radio telescope with a 3-meter dish.
- Web application for remote radio telescope control.
- Calibration, star targeting, and tracking system.
- Reading and analyzing data from Software Defined Radio (SDR).

ENGINEERING THESIS

Automatic control in an arcade game using reinforcement learning
Bachelor of Engineering thesis | project work | in progress

The goal is to develop an agent that automatically performs tasks in a dynamic arcade game requiring precise control. The project uses PPO or DQN and trains the agent based on game-state observations and reward feedback.

- Selecting the game/environment and agent-game communication method.
- Implementing a reinforcement learning algorithm such as PPO or DQN.
- Training, hyperparameter tuning, and experiments.
- Analyzing agent behavior.

Filtering

Deep Research

Florist website

IN DEVELOPMENT

PRACTICAL PROJECT

Website for a florist, built as a practical project for the parents of a student I tutor. The project focuses on clear offer presentation, contact flow, and basic online presence for a local business.

Web development

Frontend

HTML

CSS

JavaScript

Password Manager

IN DEVELOPMENT

GROUP PROJECT

Simple password manager designed as a cross-platform tool for Windows and Linux. The project focuses on secure credential storage, local-app usability, and support for multiple environments.

Security

Cross-platform

LabInc: Chemical Tycoon

COMPLETED

GITHUB.COM/XCAPES3/LABINC

Incremental/idle Java game: 16 factories, 118 chemical elements, achievement system, save/load functionality, and Swing UI.

Java

Swing

Maven

JNA

Batik

Audio

Game inventory generator

COMPLETED

Visual inventory generator for a video game, built as a simple web application.

JavaScript

HTML

CSS

PROGrozliczenie

SIMPLE TOOL

TO FINISH OR IMPROVE

PyQt5 GUI for analyzing mBank bank statements, with HTML parsing, transaction filtering, overrides, simple analytics, and filtered HTML export.

Python

PyQt5

BeautifulSoup

HTML parsing

Filtering

Export

pdfextract / DataLab PDF Extract

SIMPLE TOOL

TO FINISH OR IMPROVE

GUI/CLI for converting PDFs to Markdown through the DataLab API, with LaTeX support and an image/description extraction variant.

TECHNICAL QUALIFICATIONS

Programming and systems
C++, JavaScript, Python, REST APIs, service integrations, task automation, and practical server-environment configuration.

Telecommunications / technical systems
ETI studies, control systems, SDR, radio telescope work, calibration, and technical data analysis.

Tools and infrastructure
Windows Server 2019, Microsoft IIS, MS ADCS, DCOM, VMware, VirtualBox, Google Cloud, VS Code.

Graphics and media
After Effects, Premiere Pro, GIMP, Blockbench, and experience preparing visual materials and simple interfaces.

EDUCATION

Gdańsk University of Technology
Electronics and Telecommunications, WETI | profile: Computer Electronic Systems | 6th semester | active status, no overdue coursework

2023 - now

High School No. 3 in Sopot
Technical profile: mathematics and computer science

2019 - 2023
